Abstract (en)

[origin: WO2018054589A1] The present invention relates to methods for reducing body perspiration and/or for reducing the body odour resulting from perspiration. According to these methods, antiperspirant cosmetic agents (M1) containing specific acids or derivatives thereof are applied to the human skin and remain in the application location for at least 1 hour. The use of the at least one specific acid or derivatives thereof in these methods results in an antiperspirant effect or in the reduction of the body odour resulting from perspiration.
