Abstract (en)

[origin: WO2018055086A2] The invention relates particularly to a medical sterilisation container (2) comprising a tub-like first container section (4); a cover-like second container section (6); a filter device (26) which is disposed or mounted, particularly from outside, on at least one container section (4, 6) and particularly on a first lateral wall (10a) of said tub-like first container section (4); and a sterilisation container closure (14) which, in particular, can be sealed and comprises at least one closing flap (16) that can be positioned on one of the container sections (4, 6), between a closed position and an open position, for the purpose of closing the two container sections (4, 6) one to the other, wherein, when in the closed position, said closing flap (16) locks and/or fastens and/or secures the filter device (26) to the container section (4, 6) on which said filter device (26) is disposed or mounted, particularly the first lateral wall (10a) of the tub-like first container section (4).
