Abstract (en)

[origin: WO2019054534A1] A screenshot method and screenshot apparatus for an electronic terminal are provided. The screenshot method for an electronic terminal includes receiving a biometric feature signal, sensing a sliding track formed by a sliding operation on a display area of the electronic terminal during a period when the biometric feature signal is inputted, and intercepting an image surrounded by the sliding track. With the above screenshot method and apparatus for an electronic terminal, screenshots can be performed quickly, based on the combination of a biometric feature and the sliding operation, and thus the experience of user can be improved.
