Abstract (en)  
[origin: WO2018053744A1] According to an example aspect of the present invention, there is provided a method, comprising: receiving a first code block comprising a first information bits section and a first parity bits section for first parity bits based on first information bits of the first code block and first padding bits, the first padding bits being based on second information bits of a second code block; performing a parity check for the first code block; and updating information for decoding a received second code block on the basis of the parity check of the first code block.
