Abstract (en)
[origin: CN105708389A] The invention relates to a base station (1) for cleaning and/or clearing a vacuum cleaner dust collection chamber (5) of a first vacuum cleaner (3). The base station comprises a base station dust collection chamber (2), a first air inlet (7) and a first air outlet (8) which are connected with the dust collection chamber (2) and an air channel (9) of the first vacuum cleaner (3), wherein the sucked materials in the vacuum cleaner dust collection chamber (5) are conveyed to the base station dust collection chamber (2) in aid of a fan. In order to simultaneously connect several kinds of vacuum cleaners on the base station, the base station (1) comprises at least one interface (13) for loosely connecting with an adaption module (16), wherein the interface (13) comprises a second air inlet (12) which is closable and connected with the base station dust collection chamber (2), and when the adaption module (16) is connected with a second vacuum cleaner (3), the sucked materials in the vacuum cleaner dust collection chamber (6) of the second vacuum cleaner (3) is conveyed to the base station dust collection chamber (2) by a second air inlet. The invention also relates to the adaption module (16) for loosely connecting the vacuum cleaners (3,4) and the base station (1), and a method for cleaning and/or clearing the vacuum cleaner dust collection chamber.
