Abstract (en)  
An abrasive blasting cabinet comprises a cabinet housing (1) and a transparent plate (6) attached to an opening (6a) in the cabinet housing (1). Inside the cabinet in front of the plate, apart from the plate, there is a protective net (7) of the plate. The plate and protective net and battens (8) attached between them form a case-like structure, which has one or more openings (9), which are connected to the outside (1a) of the cabinet housing (1). The connection from the case-like structure through the opening to the outside of the cabinet is realized by means of a channel (10), through which air coming into the case-like structure (9a) between the protective net (7) and the plate (6) is led to flow completely or partly in the direction of the plate (6) surface.
