Abstract (en)

[origin: WO2018060610A1] Pot (100) comprising a body (10) exhibiting a cavity having an opening (11b), and a lid (20) able to move with respect to the body (10). The body (10) comprises an engagement element (14e) and the lid (20) comprises a closure tab (70) able to move between an engaged position in which, when the lid (20) is in a shutting-off position in which the lid shuts off the opening, the closure tab (70) collaborates with the engagement element (14e) and thus keeps the lid (20) in the shutting-off position, and a disengaged position in which the closure tab (70) does not collaborate with the engagement element (14e). The pot comprises a blocking tongue (42), able to move between a locked position in which it blocks the closure tab (70) in the engaged position, and an unlocked position in which the closure tab (70) is able to move between the engaged position and the disengaged position.
