Abstract (en)
[origin: WO2018060716A1] An endoprosthetic device (1) comprises a tubular main body (3) having a length including proximal and distal portions (11, 13), the tubular main body having a flexible portion between the proximal and distal portions, and at least one adjustable length docking branch (5) extending laterally from the tubular main body (3), and having sections bearing a tab or loop (17) graspable by a user, and optionally further having at least one auxiliary branch (7), and at least one access branch (9), for assembly with at least one tubular branch body (36) having a laterally extending access branch (37), using a delivery system including a delivery shaft (103), and a retrieval capsule (81) and corresponding press-fit retrieval pin (57) and retrieval wire (83), wherein the delivery shaft (103) is provided with a pivotal slotted housing (101) serving as a user handle for the delivery shaft (103).
