Abstract (en)
[origin: WO2018060013A1] The invention relates to a final drive (1) for a motor vehicle, comprising a first input shaft (2), a second input shaft (4), a first output shaft (7) and a second output shaft (10), wherein the first input shaft (2) is permanently coupled to the first output shaft (7) by means of a first bevel-gear transmission (6) and the second input shaft (4) is permanently coupled to the second output shaft (10) by means of a second bevel-gear transmission (9). It is provided that the first input shaft (2) and the second input shaft (4) are arranged coaxially to each other and the first output shaft (7) and the second output shaft (10) extend from the respective bevel-gear transmissions (6, 9) in opposite directions, wherein an axis plane (21) contains the axes of rotation (17, 18) of the input shafts (2, 4) and a plane perpendicular to the axis plane (21) includes an angle of at least 75° and at most 90° with each of the axes of rotation (19, 20) of the output shafts (7, 10), and that a first bevel gear (13) of the first bevel-gear transmission (6), which first bevel gear is rigidly connected to the first output shaft (7), and/or a second bevel gear (15) of the second bevel-gear transmission (9), which second bevel gear is rigidly connected to the second output shaft (10), are/is mounted in a drive housing (16) of the final drive (1) in each case by means of a first radial bearing (43) and a second radial bearing (44), which are arranged in O arrangement to each other or are designed as a fixed bearing and as a floating bearing.
