Abstract (en)
[origin: WO2018059741A1] According to the invention, the device comprises at least one flap spacing head (12a, 12b), the flap spacing head being vertically mobile for it to be inserted into a container to be processed (3) and comprising first and second flap spacing blades (1212, 1212) mounted on a swivel and an actuator (1221, 1222). The actuator is capable of rotating the flap spacing blades, which come into contact during rotation with the flaps (R1a, R1b) and cause a spacing thereof by folding towards the outside of the container.
