Abstract (en)

[origin: WO2018060146A1] The invention concerns a sandwich structure for a construction element comprising a quadrangular frame consisting of two uprights and two crosspieces, the frame being covered by two panels attached to either side of said frame such that the inner surface of each of said panels closes a cavity defined between the four inner faces of the uprights and crosspieces, characterised in that said frame cooperates with at least one connection part, a first face of which is in direct contact with the inner face of an upright and a second face of which is in direct contact with the inner face of a crosspiece adjacent to said upright.
