Abstract (en)  
[origin: WO2018060284A1] Light-emitting module, in particular for a motor vehicle. The light-emitting module comprises: a substrate (14) comprising a curved main portion; light-emitting elements (16) arranged on a face of the substrate and configured to generate light rays; and a curved screen (18) arranged facing said face of the substrate and spaced apart from said face, the screen being designed to have a surface illuminated by the light rays emitted by the light-emitting elements, the screen having the property of scattering the light emitted by the light-emitting elements, each light-emitting element being arranged on the substrate in a given zone, each light-emitting element furthermore being arranged to emit the corresponding light rays in a main emission direction that is angularly offset with respect to a local direction that is normal to the substrate in said given zone.
