Abstract (en)
[origin: WO2018064013A1] Disclosed are surprising new methods and kits for identifying and treating patients treatable with PS-targeting antibodies, particularly for identifying and treating cancer patients using bavituximab and bavituximab combination therapies. The methods and kits are based on the surprising finding that defined ranges of pre-treatment blood concentrations of β 2-glycoprotein 1 (β 2GPI), particularly functional β 2GPI, act as an indicator to accurately predict patients with better treatment outcomes.
