Abstract (en)  
[origin: WO2018019331A1] Chronograph, in particular a chronograph watch, having a housing and a crown, which is arranged along a crown axis, wherein the chronograph has operating elements for operating the time-measuring function of the chronograph, wherein the operating elements are arranged at an angle to the crown axis, wherein the operating elements are arranged within the chronograph, wherein the chronograph has a covering element for covering the operating elements, wherein the covering element, in a starting position, is arranged flush with the housing, wherein the covering element can be pivoted about an axis, wherein the axis is arranged perpendicularly to the crown axis, and so as to intersect the latter, and wherein the covering element, in a pivoted position, is in contact with one of the operating elements such that the covering element actuates one of the operating elements.
