Abstract (en)

[origin: WO2018060377A1] The invention relates to a cable holding device (100) for mounting a cable (108) to a housing or to a wall opening, having a first holding element (101), comprising a first opening (103), and a second holding element (105), comprising a second opening (107), wherein the first holding element (101) and the second holding element (105) are designed so as to be arrestable in a holding position, and the first opening (103) and the second opening (107) are arranged aligned to each other in the holding position, wherein the first holding element (101) and the second holding element (105) are designed such that the first holding element (101) and the second holding element (105) can be transitioned to the holding position by a translational movement.
