Abstract (en)

[origin: WO2018060573A1] The invention relates to a system for sharing media content for a motor vehicle, comprising an infotainment device (10) installed in said vehicle and equipped with a display screen (12) and/or sound distribution means (13), as well as a plurality of embedded mobile terminals (20, 30, 40, 50) connected to each other via a local wireless network, one (20) of said terminals being connected to said infotainment device (10) such that said screen (12) and/or said sound distribution means (13) reproduce the display and/or the sound of the media content read by this terminal; each one of said terminals being configured to establish and update, in real time, the list of all media content that itself and all of the other terminals host themselves, each terminal further being configured to be able to itself read or request the reading on one or several of the other terminals of each piece of media content from said list.
