Abstract (en)

An automatic winder (4) includes a plurality of winder units (42) adapted to wind a yarn (14) to form a package (15), a storage section (41c) adapted to store a post-maintenance operation time, which is an operation time from when a simultaneous maintenance is performed immediately before, for each of the plurality of winder units (42), and a winder control section (41) adapted to control at least either of startup and stop of the plurality of winder units (42) based on the post-maintenance operation time stored in the storage section (41c).
