Abstract (en)
[origin: US2019241424A1] A stirrup for horse-riding, including a tread of which a first end is connected by a first side branch to an upper portion of the stirrup adapted to receive a stirrup leather, and including a second side branch movable between a position for use in which the second side branch connects a second end portion of the tread to the upper portion and open positions in which the second side branch is distanced from the second end portion of the tread. The second side branch is connected to the upper portion by a swivel linkage and, in the position for use, the second side branch is secured to the second end portion of the tread by magnetic attraction.
