Abstract (en)

[origin: EP3521383A1] The photocurable liquid silicone composition of the present invention comprises: (A) a straight chain organopolysiloxane having at least two alkenyl groups with 2 to 12 carbon atoms in a molecule, and not containing a mercaptoalkyl group; (B) an organopolysiloxane having at least two mercaptoalkyl groups in a molecule; (C) a branched chain organopolysiloxane, wherein alkenyl groups and mercaptoalkyl groups are not included; (D) a photo radical initiator containing a phosphorus atom; and (E) a hindered phenol compound, is rapidly cured by irradiating with long wavelength light while providing excellent storage stability and coatability at room temperature and at low temperatures (approximately 0°C), and provides a cured product that maintains transparency even when left under high temperature and high humidity conditions, with minimal clouding or discoloration.
