Abstract (en)

[origin: KR20190095090A] A method for preventing imprecisely set stitch on an embroidery base part (17) of an embroidery machine is attained since the embroidery base part (17) is held stationary above and/or below each stitch area by means of a fixed plate (43) or a needle (41) having a high friction action. An apparatus comprises components having high friction action such as knaps made of rubber or foam cushions or the fixed plate (43) which is movable relative to the embroidery base part (17) by the needle (41).
