Abstract (en)
A leakage protection device (1) for a tank (2) for a toilet (3) of a bathroom comprises a shell (10) and a closing panel (12) sealably joined to the shell at a shell perimeter edge (100) so as to define a chamber (11) intended to house the tank (2). The closing panel (12) is intended to be arranged substantially parallel to the bathroom wall (4). The protection device (1) is configured to completely enclose the tank (2). Moreover, the closing panel (12) comprises at least one upper opening (121) to allow access to the tank, and a lower opening (122), distinct from the upper opening (121), suitable to accommodate the passage of a pipe (21) for flushing water from the tank (2) to the toilet (3).
