Abstract (en)
The rotating multi-socket light fixture (10) may be used in combination with a ceiling panel (24) or the like, allowing for changing of light bulbs for a recessed light, for example. The rotating multi-socket light fixture (10) includes a plurality of light bulb sockets (36) mounted circumferentially on a wheel (20) for respectively removably receiving a plurality of light bulbs (12). The wheel is mounted on, and rotationally driven by, a rotational drive motor (18). The rotational drive motor is mounted on a vertical support (44) such that the rotational drive motor may be vertically adjusted with respect to the vertical support. A vertical drive motor (16) may be mounted on an upper end of the vertical support for selectively driving vertical translation of the rotational drive motor with respect to the vertical support. A lower end of the vertical support is mounted on an upper surface of the ceiling panel, such that the vertical support extends upwardly therefrom.
