Abstract (en)

Provided is an indoor unit for an air conditioning device with which it is possible to minimize reductions in the rigidity of a front panel (3) even when the lower portion of an accessible opening is open to a terminal block. The present invention comprises: a terminal block in which a connection terminal of an electrical system is provided to a body; a front panel (3) positioned on the front-surface side of the body, the front panel (3) having an opening which is formed toward the front-surface side of the terminal block and of which one side is open; a cover part (7) for covering the opening, the cover part (7) being detachably provided to the front panel (3); and a bottom panel (6) for closing the one open side of the opening, the bottom panel (6) being detachably provided below the front panel (3).
