Abstract (en)
A rotary knob (10) comprises a base (12), a cylindrical core (14) attached to the base and defining a rotational axis, a bearing (16) supported on the core, a grip portion (18) supported by the bearing for rotation about the rotational axis (A), conversion means (20) for converting the rotary movement of the grip portion into an output signal, and a feedback device for providing haptic feedback to the user via the grip portion and comprising a detent ring (19) configured for rotation with the grip portion about the rotational axis and resilient means configured to engage the detent ring.
