Abstract (en)
[origin: WO2018069804A2] Furazidin composition in the form of suspension. A method of manufacturing the said composition where a phase I is obtained in such a way, that the suspending agent is dispersed in a part of purified water, then polyhydric alcohol or/and sugar, furazidin and possibly flavoring agents are added, the whole is homogenized, then a phase II is obtained in such a way that preservatives or/and the buffering mixture is dissolved in the remaining part of the purified water, then the phase II is added to the phase one. Furazidin composition in the form of powder or/and granules or/and coated granules. A method of manufacturing the said composition where a water or/and organic solution of the substance having binding properties is prepared, then furazidin is mixed with the substance having emulsifying properties and/or with the bulking agent, then the mixture is granulated. The obtained granules are calibrated and dried, and then possibly mixed with other excipients.
