Abstract (en)
[origin: WO2018069057A1] The invention relates to a device for the continuous production of a solid form, comprising: an extruder (3) for mixing and hot-melting at least one component with at least one polymer for an amorphous solution; and a cutting device (1) mounted downstream of the extruder (3), for cutting the semi-solid bead that results from the melting of the mixture of the component with the polymer for an amorphous solid solution, said cutting device being combined with a forming system (2) for forming the solid form supplied by the cutting device.
