Abstract (en)

[origin: WO2018069328A1] Closing unit (40) to close an aperture (23) of at least one capsule (22) with a closing element (28) to form an encapsulated article (20), said capsule (22) containing at least one dose of reagent product (24) and a filter (26) and said closing element (28) being suitable to let the fumes and/or the vapors produced pass from inside the encapsulated article (20), wherein the closing unit comprises an engagement device (43) of the closing element (28), in cooperation with the aperture (23) of the capsule (22), and a welding device (45) configured to weld the closing element (28) in direct connection at least with an abutment portion (25) of the capsule (22). The present invention also concerns a machine (10) to make articles (20) in capsules comprising the closing unit (40) as well as a connected closing method.
