Abstract (en)

[origin: WO2018065841A1] Compound profile for the assembly of a frame (2) or a leaf (3) of a window or door (1), with the compound profile comprising a basic profile (4, 5) that is made up of an outer shell (6) with an outer side (6') and an inner shell (7) with an inner side (7'') and one or more insulation channels (8) that connect both shells to each other, whereby the basic profile (4, 5) comprises at least one lateral side (10, 11) that joins said outer side (6') and inner side (7'') to each other, characterised in that the compound profile comprises, apart from the basic profile (4, 5) an insulation profile (15), whereby the basic profile (4, 5) and/or the insulation profile (15) are provided with coupling parts (12, 19) to be able to attach the insulation profile (15) against an aforementioned lateral side (10, 11), whereby these coupling parts (12, 19) are such that they allow adjustment of the lateral position of the insulation profile (15) with respect to the relative lateral side (10, 11) of the basic profile (4, 5).
