Abstract (en)

[origin: WO2018067698A1] A system and method for verifying unstructured enterprise resource planning data. The method includes analyzing a first electronic document to determine at least one transaction parameter of a transaction, wherein the first electronic document includes at least partially unstructured data; creating a template for the transaction, wherein the template is a structured dataset including the determined at least one transaction parameter; searching, in an enterprise resource planning system, for a matching second electronic document based on the created template; and verifying the transaction, when the matching second electronic document is found.
