Abstract (en)
[origin: WO2018069304A1] The invention relates to an apparatus (1) for presenting goods, having at least one compartment (3) in which goods (11) are stocked, wherein the lowermost or foremost goods item (11) in the at least one compartment (3) can be removed from the compartment (3) via an ejector or manually, wherein an optical sensor (5) is provided on the at least one compartment (3), said sensor being intended to determine the filling level of the goods in this compartment (3) and having an emitter (12) and a receiver (13) for electromagnetic radiation (14), wherein the filling level of the compartment (3) can be determined by means of a controller (15) on the basis of the propagation time of the signal (14) emitted by the emitter (12) between the emitter (12) and the receiver (13).
