Abstract (en)

When a midfoot portion 14 of a sole 10 is divided by a predetermined sole center line s into an medial midfoot region 20 and a lateral midfoot region 22 one on each side in the foot width direction, a rigidity lowering portion 32, which is provided in the medial midfoot region 20, is provided and, in such a manner that the bending rigidity of the medial midfoot region 20 around a foot width direction axis becomes smaller than that of the lateral midfoot region 22, the rigidity lowering portion 32 in the medial midfoot region 20 reduces the bending rigidity of the medial midfoot region 20 due to another factor other than the shape of the medial edge 10c and the shape of the lateral edge 10d of the sole 10 in a planar view.
