Abstract (en)
[origin: WO2018049532A1] Embodiments described herein relate generally to wearable electronic biosensing garments. A biosensing garment includes a first stretchable cup configured to receive a first breast of a wearer during use, and a second stretchable cup configured to receive a second breast of the wearer during use. The biosensing garment also includes a rigid portion, a chest band, and a mesh portion. The rigid portion is disposed between the first stretchable cup and the second stretchable cup and configured to couple the first stretchable cup to the second stretchable cup. The chest band is configured to be disposed about the chest of the wearer. The mesh portion is disposed between the first and second stretchable cups, and the chest band, and is configured to couple the first and second stretchable cups to the chest band. The biosensing garment is configured to limit three-dimensional movement of the first and second breasts of the wearer during use.
