Abstract (en)
[origin: WO2018068850A1] The invention relates to a cleaning device comprising at least one noise source (22) and an air guide device (28) with at least one flow deflection element (60). The at least one flow deflection element has a first arm (61a) with an inlet tube (62) and a second arm (61b) with an outlet tube (64), and the outlet tube (64) is oriented transversely to the inlet tube (62). The inlet tube (62) has an inlet (66) which extends in a first depth direction (86) and in a first width direction (88), and the outlet tube (64) has an outlet (70) with a depth (T2) in a second depth direction (90) and a width (B2) in a second width direction (92). The first depth direction (86) and the second depth direction (90) are parallel to each other, and the first width direction (88) and the second width direction (92) are transverse to each other, said width (B2) equaling at least 1.2 times the depth (T2).
