Abstract (en)

[origin: CA3039854A1] The present invention relates to a device for shaping a blank (1) of material in sheet form around a mandrel, in order to obtain a box or part of box of polygonal cross section, comprising: a mandrel, means for wrapping around the mandrel, means for securing the tab, means for folding the flaps, and means for fixing together the flaps thus folded. The means for wrapping the panels and the means for securing the tab are supported by two cradles positioned one on each side of the mandrel, transversely and symmetrically with respect to the direction in which the blank is brought in from the glue-application workstation.
