Abstract (en)
[origin: WO2018072945A1] The invention relates to a device for accommodating punched sheets, in particular loose sheets of paper, and a folder, in particular a binder, having such a device. The device comprises a base plate (2), at least two retainer bracket pairs (3) designed to be openable and closable, each of which having a first bracket (31) and a second bracket (32), wherein the at least two first brackets are connected to each other by a bracket connector (7) that is connected to the base plate so as to be rotatable about an axis of rotation (A) that runs parallel to the base plate, and is connected to a pivot lever (4). The device further comprises a carriage (5) that is displaceably mounted on the base plate, wherein the carriage has a link (6) that guides the pivot lever and is designed such that, when the carriage (5) is displaced, the link (6) determines a rotational movement of the pivot lever (4) about the axis of rotation (A), which is parallel to the base plate (2), in both directions of rotation.
