Abstract (en)
[origin: WO2018068892A1] The invention relates to a windscreen wiper with a wiper arm and a wiper blade, and a cover attached to the wiper arm, into which at least one nozzle for windscreen washer fluid is built. The supply system for the windscreen washer fluid can also be built into the cover. Furthermore, the cover is designed such that the wiper blade, the wiper arm and the cover can be detached from each other. The cover closes the gap between the bonnet and the windscreen in the idle state and can be made compact for the operating state by means of a mechanism.
