Abstract (en)

[origin: CA3040170A1] The present invention concerns a ship (1) provided with an installation (2) for launching and recovering floating or submersible vehicles (E), that comprises a lifting device (3) comprising a set of cables (35) that holds a basket (4) configured to support said vehicle (E) during said launching and recovering operations, said cables (35) being movable vertically between two positions, a high and a low position respectively, characterised by the fact that said basket (4) comprises an upper face (430) that bears against a surface (341), referred to as a "contact surface", of said lifting device (3), only when said cables (35) are in the high position.
