Abstract (en)

[origin: WO2018073042A1] The invention relates to a device (1) for dispensing pressurised product (G) extending axially on an axis (X), the device (1) including: a storage housing (2) including a hollow body (20) filled with a pressurised product (G), an upper mounting opening (21) and a neck (3) connecting said hollow body (20) to said upper mounting opening (21), and a dispensing valve (4) including a cup (40) and a dispensing member (41), the cup (40) including a peripheral attachment crown (42) which is tilted towards the inside; the neck (3) including a seat portion (5), tilted towards the inside, which has a length of 0.5 mm to 5 mm in an axial cross-section plane, so as to form a seat; and a blocking portion (6) folded onto the upper surface of the attachment crown (42) so as to block the position thereof.
