Abstract (en)

[origin: WO2018041399A1] The invention relates to a device for actuating a discharge valve (19) of a WC flush tank (1), comprising at least one push-button (23, 25; 81) that, when manually push-actuated, sets the discharge valve (19) to an open position in which a quantity of flushing water can flow out of the discharge connector (5) of the WC flush tank (1). According to the invention, the device has at least one control valve (43) which can be actuated by the push-button (23, 25; 81) and is arranged in a control line (35) connected to a water supply grid. When the push-button (23, 25) is manually push-actuated, a volumetric flow rate (rh) of water can be set by means of the control valve (43), said volumetric flow rate of water being used to actuate the discharge valve (19).
