Abstract (en)

[origin: WO2018069309A1] The invention relates to a sensor device (1) for a vehicle, in particular a motor vehicle, having at least one sensor module (2) and having at least one connecting line connected to the sensor module (2) for making electrical contact with the sensor module (2). According to the invention, the connecting line is formed as a conductor film (3), on which a plurality of different sensor modules (2) are arranged and are housed by respectively one or a common encapsulation (8) encompassing the conductor film (3), at least in some sections.
