Abstract (en)
[origin: WO2018069651A1] The invention relates to an underwater system for connecting at least three underwater high-voltage or very high voltage electrical cables (10', 10", 10""), of the type comprising: - an outer cage (22) defining a connection space; - a connection fitting (30) comprising a conductive connection electrode (32) which has a junction node (34) from which at least three branches (36', 36", 36"") extend; characterised in that - each of said at least three branches (36', 36", 36"") of the conductive electrode (32) comprises a male terminal portion (38) which is connected to one of the electrical cables in a connection zone around which is mounted a connection sleeve (44, 46) made of insulating premoulded material, which receives, via each end, a male terminal portion (38) of one of the branches of the conductive electrode and the connection end of one of the electrical cables.
