Abstract (en)
[origin: CN209939102U] The utility model relates to packaging equipment for articles. The packaging equipment comprises at least one horizontal conveying device used for conveying articles. Furthermore, the packaging device comprises at least one inlet (4), which can introduce the planar packaging blanks (2) into the transport path of the articles such that the articles are moved onto the planar packaging blanks (2) introduced into the transport path during transport by means of at least one horizontal transport device. It is also provided that the input (4) comprises a first conveying device (20), which is intended to introduce the first planar packaging blank (2) into the transport path of the articles. Furthermore, it is provided that the at least one input comprises a second conveying device (30), which is intended to introduce a second planar packaging blank, which is different from the first planar packaging blank, into the transport path of the articles.
