Abstract (en)  
Waste treatment apparatus comprises:(i) a chamber to receive a waste;(ii) a heater to heat the waste in the chamber;(iii) an inlet for air;(iv) an outlet for exit of treated waste from the chamber, connected via a conduit to a valve distal from the chamber, the valve controlling exit of treated waste from the outlet; and(v) an insulating unit capable of (a) locating insulation between the outlet and the valve so that the valve is protected from chamber heat and (b) removing the insulation so that treated waste can exit the chamber via the distal valve.Instead of or in addition to the insulating unit a sump is provided in which liquids in the chamber collect and are prevented from flowing via the outlet to the valve.
