Abstract (en)
[origin: WO2018075898A1] Aspects herein relates to a garment (100) designed to provide an enhanced range of motion. This is accomplished by having a layered construction comprising different fabric/textile materials where the enhanced range of motion is desired. The garment (100) in accordance with aspects herein particularly provides an enhanced range of motion for a wearer around the shoulders and arms. This enhanced range of motion may be especially beneficial when the wearer is engaged in a physically demanding activity or any activity benefitting from a wide range of movement by the wearer's arms and shoulders.
