Abstract (en)

[origin: WO2018072765A1] The object of the invention is a hospital device for patient support comprising a central control unit with a connectable data hardware key containing the configuration connected to it. Furthermore, the hospital device for patient support includes peripherals such as sensors, drives, connectable accessories, compressors and control units. The configuration includes program instructions for performing required peripheral operations, software for the patient's communication interface for communication with the hospital device for patient support, information on the peripherals connected to the hospital device for patient support and other similar information.
