Abstract (en)

[origin: WO2018071940A1] The invention relates to a method for producing profiled plastic sections in an extrusion line consisting of multiple tools, wherein a starting material is plasticized and molded in an extruder (1) and then cooled and calibrated in at least one drying calibration unit (3, 3a, 3b) and at least one calibration tank (4). The material is then divided into individual profiled sections (101). The quality of the profiled sections is improved in that a central control unit (10) is provided which is connected to the tools and obtains data from the tools for uniquely identifying the tool and data on the state of the tool and transmits back adjustment data for said tool and other tools.
