Abstract (en)  
[origin: WO2018073100A1] The invention relates to an extrusion blow mold (1) for producing hollow bodies (2) by extrusion blow molding, comprising at least two mold components (3), e.g. mold halves, which in the closed state define a mold chamber (4) bounded by a mold chamber wall (5), characterized in that a plurality of temperature sensors (9) is integrated into at least one mold component (3), by means of which temperature sensors the temperature of the hollow body (2) in the blow mold (1) can be measured in a plurality of regions of the mold components (3).
