Abstract (en)

[origin: WO2018095961A1] The invention relates to a wheel control assembly for a bogie of a rail vehicle, the bogie having at least one bogie frame (1) and at least a first pair of wheels (5) with a first wheel bearing (13). According to the invention, in order to create advantageous design conditions, at least one first elastic bearing (21) which sets the steering angle is provided with a first hydraulic supply (29), wherein the first hydraulic supply (29) has a closed hydraulic circuit, and wherein the at least first elastic bearing (21) has a dynamic stiffness when the first hydraulic supply (29) is put out of operation. This measure increases the fail-safety of a wheel control system or wheel set control system..
