Abstract (en)

[origin: WO2018073801A1] Sealing to seal a wall element with a fixed frame consisting of mullions (9) and transoms (10) with perpendicular ends with which the transoms (10) are attached between the mullions (9), whereby the fixed frame (3) is fitted with at least one compartment with a rebate (40) for a frame part (3") with an infill element (6) to create a wing that opens, or to replace a damaged infill element (6), characterised in that the seal is intended to create a windproof and watertight connection between the mullions (9) and transoms (10) in the corners of an aforementioned compartment, whereby the seal is made as a corner piece (44) that is formed and sized such that, on the level of the corners to be sealed, it fits in the form of the rebate (40) in the mullion (9) and transom in question (10) and overlaps and covers the connection between this mullion (10) and transom (10) at the level of the rebate (40).
