Abstract (en)

[origin: WO2018073245A1] The invention relates to a lock (6) for a closure element (2) of a real estate property, comprising a pivoting catch (41) on which a spring acts in a preferred direction, a locking member (38), and a manual or mechanical drive device (37). The locking member (38) is designed as a rotary locking member (39) that is driven by the drive device (37) in a circulating manner about a locking member axis (40) in only one rotational direction and comprises multiple locking elements (42) which are offset to one another over the angle at the circumference of the locking member and which interact with the pivoting catch (41) as respective tumblers depending on the rotational angle. Only one of the locking elements (42) constantly acts directly on the pivoting catch (41) for a locking and unlocking process, and the adjacent locking element (42) opposite the rotational direction of the rotary locking member (39) acts on the pivoting catch (41) by rotating the rotary locking member (39) for a subsequent locking and unlocking process.
